Blend

Re: Application for AI and Data Engineer at Blend

Dear Hiring Manager,

I am excited to apply for the AI and Data Engineer role at Blend, where I can leverage my expertise in building predictive tools for high-volume operational environments and executive-ready reporting ecosystems to drive innovation in AI and data engineering.

With over two years of experience as a Data Analyst and Power BI specialist, I have developed a strong background in connecting IT, Finance, and Operations stakeholders through clear management insights, reliable semantic models, and automated KPI reporting. Notably, at Brock Canada, I designed and maintained Power BI data models integrating SAP B1, labour, cost, contract, productivity, and progress data, improving reporting accuracy by 30% and establishing a single source of truth for business decision-making.

In addition to my technical skills in Power BI, DAX, Power Query (M), SQL, Python, and data modeling, I have also gained experience building predictive project analytics applications that forecasted lump-sum project overruns and identified early risk indicators. For instance, at Brock Canada, I built a predictive project analytics application that improved forecast accuracy and supported proactive cost-control decisions.

I am confident that my passion for AI and data engineering, combined with my hands-on experience in software engineering, data engineering, and ML engineering, make me an ideal fit for the role. I look forward to discussing how my skills and expertise can contribute to Blend's success.

Sincerely,
Shrey Modi
